

World Plate Map

You are going to cut out the map and stick it in your book. You will then draw and label the major plates and plate boundaries onto the map.

1. Draw and label the major plate boundaries. Use either a different colour or style of line for each type of plate boundary to differentiate.
2. Label the major plates.
3. Draw arrows to indicate the direction in which each plate is moving.
4. Indicate where specific volcanoes and fault lines are.
